

Numerical modelling of turbulent iron combustion

PROEFSCHRIFT

ter verkrijging van de graad van doctor aan de Technische Universiteit
Eindhoven, op gezag van de rector magnificus prof.dr. S. Lenaerts, voor een
commissie aangewezen door het College voor Promoties, in het openbaar te
verdedigen op dag XX maand jaar om YY:ZZ

door

Shyam Sundar Hemamalini

geboren te Coimbatore, India

Dit proefschrift is goedgekeurd door de promotoren en de samenstelling van de promotiecommissie is als volgt:

voorzitter:

promotor: prof.dr.ir. N.G. Deen

copromotoren: dr. G. Finotello

dr.ir. J.J.C. Remmers

leden: professor (universiteit)

adviseur: naam (bedrijf)

Het onderzoek dat in dit proefschrift wordt beschreven is uitgevoerd in overeenstemming met de TU/e Gedragscode Wetenschapsbeoefening.

“Very deep quote”

Some old guy, long ago

Numerical modelling of turbulent iron combustion
by S.S. Hemamalini
Technische Universiteit Eindhoven, 2026

1.1. The iron power cycle

...

1.2. Kinetics of micron-sized iron particle combustion

...

1.3. Turbulent iron powder flames

...

1.3.1. Multiphase phenomena involving turbulence

1.3.2. Large-scale industrial combustors

1.4. Goal and outline of the dissertation

This thesis is organized as follows. In Chapter 2 ...

In Chapter 3, ...

In Chapter 4, ...

In Chapter 5, ...

Chapter 8 summarizes the work in this thesis. Recommendations are provided for further research/investigation on ...

2

**Numerical framework for
simulation of turbulent iron
combustion**

Abstract

Nam dui ligula, fringilla a, euismod sodales, sollicitudin vel, wisi. Morbi auctor lorem non justo. Nam lacus libero, pretium at, lobortis vitae, ultricies et, tellus. Donec aliquet, tortor sed accumsan bibendum, erat ligula aliquet magna, vitae ornare odio metus a mi. Morbi ac orci et nisl hendrerit mollis. Suspendisse ut massa. Cras nec ante. Pellentesque a nulla. Cum sociis natoque penatibus et magnis dis parturient montes, nascetur ridiculus mus. Aliquam tincidunt urna. Nulla ullamcorper vestibulum turpis. Pellentesque cursus luctus mauris.

This work used the Dutch national e-infrastructure with the support of the SURF Cooperative using grant no. EINF-8301.

2.1. Introduction

Citing something to show that it works [1]. Reference to Chapter 1. More info can be found in Appendix A.1.

2.2. Eulerian-Lagrangian framework

2.2.1. Gas-phase model

2.2.2. Particle model

2.2.3. Two-way coupling

2.3. Implementation

2.3.1. Direct numerical simulation in NTMIX-CHEMKIN

2.3.2. Large eddy simulation in *OpenFOAM*

2.4. Validation

2.4.1. Limitations

2.5. Summary

3

Theoretical analysis of timescales in turbulent iron combustion

*Parts of this chapter are published in:

8.1. Conclusions

The findings from each study are summarized in the individual chapters. Here, the overall findings/insights are summarized in the following:

- ...
- ...
- ...
- ...

8.2. Outlook

However, many new research questions also arise, which were not investigated due to time and recourse restrictions. These can be summarized as:

- ...
- ...
- ...
- ...

A

Appendices

Background image: ...

A.1. Supplementary of Chapter 2

This appendix discusses in greater detail the derivation and implementation of the phase fraction equation and pressure correction step in the solver *compressibleInterIsoFoam* in OpenVFOAM[®] version 24.06.

A.2. Supplementary of Chapter 3

A.3. Supplementary of Chapter 4

A.4. Supplementary of Chapter 5

A.5. Supplementary of Chapter 6

A.6. Supplementary of Chapter 7
